SEG WALL MOUNT INSTRUCTIONS

WALL MOUNTING BRACKET (OPTIONAL)

CORNER BRACKET (OPTIONAL)

STRAIGHT BRACKET (OPTIONAL)

**1** Layout all the SEG pieces before installation. They will be individual marked e.g. Top, Bottom or Side. Depending on the frame size, you may have several pieces.
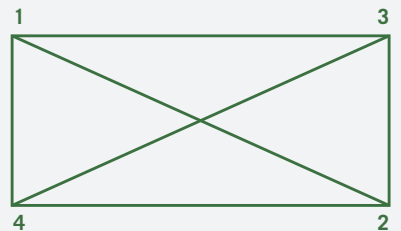

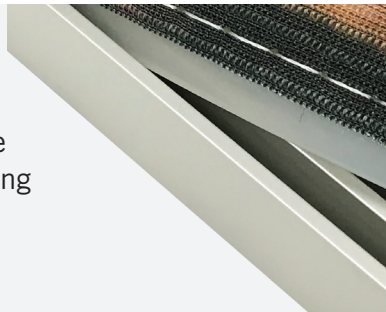

2 If you have PURCHASED corner brackets and/or straight brackets, insert the brackets into the channel on the frame. Please use the included Allen wrench to tighten all screws. If you purchased a hanging bracket, install the bracket on your wall at your desired height using appropriate wall anchors as needed. Proceed to step 4.

3 If you have NOT PURCHASED corner brackets or straight brackets, you will install the SEG frame pieces individually onto your wall surface. TIP: Using safe release masking tape (use the appropriate tape for your specific application) mark out a template for the frame pieces. Ensure the markings are squared and level. Once this is done, install the appropriate wall anchors every 16". Pre-drill the frame where the anchors will be inserted. Securely attach the frame onto your wall.

4 Once the frame is completed you can now install the graphic.

5 Following the "X" pattern outlined in the diagram to the right, begin to insert the silicone edge of your graphic into the channel. Proceed in an "X pattern, starting with #1, then #2, #3, and #4, until all corners are completed.

6 Insert a small section of the silicone edge into the channel in the following order: TOP CENTER, BOTTOM CENTER, LEFT CENTER, RIGHT CENTER. Once the corners and center points are secure, insert the remaining silicone into the channel working from the center points to the corners. At this point, your graphic should be tautly displayed in the frame.
